```

Here we have created shoe page using 3 div tags in body tag in the html file. For each div we have created a class named container, shoe and content respectively. Container for the background , shoe div used for shoe image and some texts inside p tags and h1 tags which is inside the content class.

Then in the css part we have use universal margin and padding to 0 and used border box. Then for each div we have given position ,height ,width, margin, padding and for shoe image we have used hover to enlarge the image.
